01

Definition

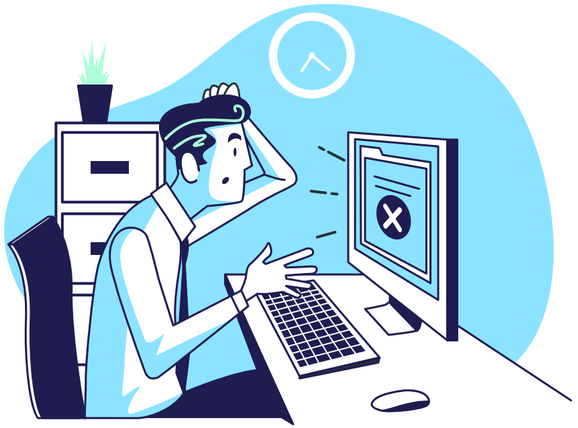
What is RANSOMWARE Attack ?

Type of malware that encrypts data specifically asking for payment in order to restore access.

02

Types of ransomware

Types of ransomware:



Locker Ransomware:

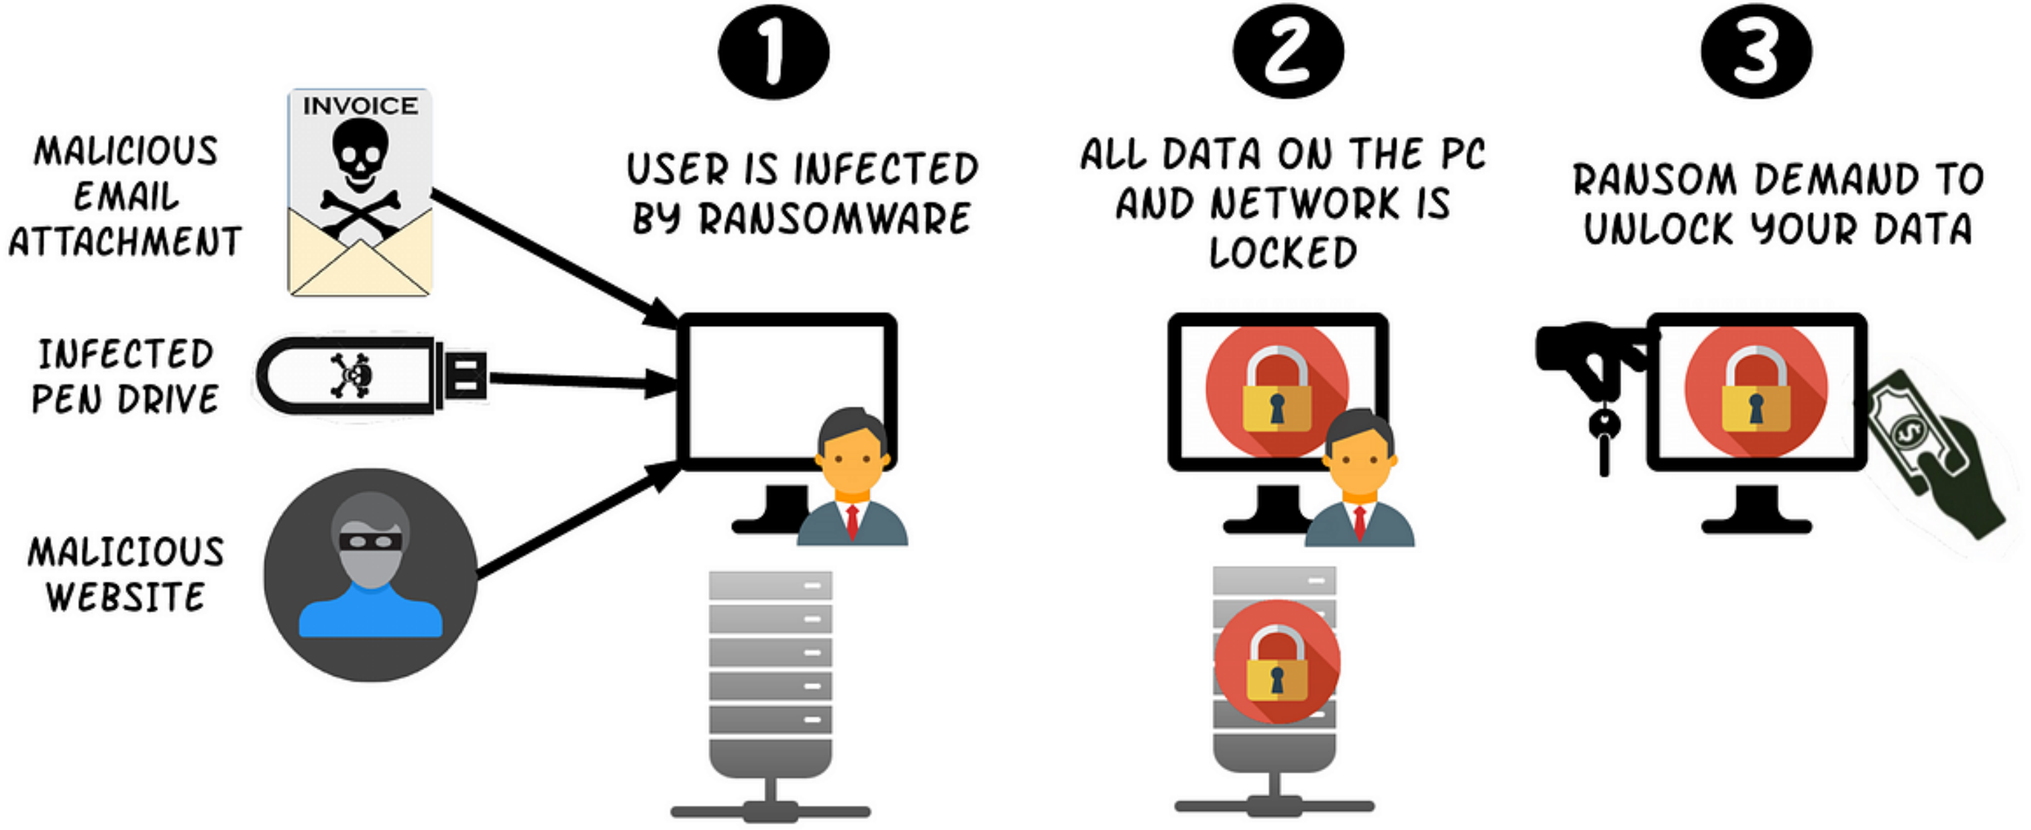
Unlike encrypting ransomware, locker ransomware locks the victim out of their entire system.

Encrypting Ransomware:

This type of ransomware encrypts files on the victim's system, rendering them inaccessible until a ransom is paid

03
How its work ?

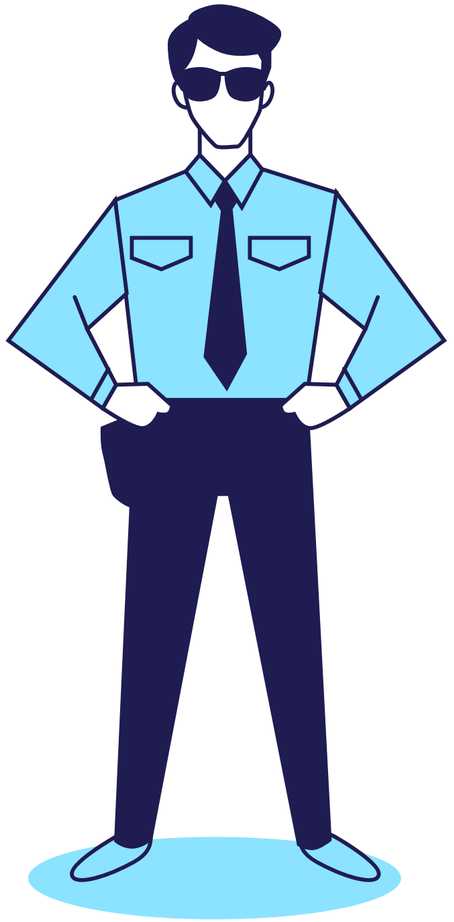
HOW RANSOMWARE WORKS?



04

How to avoid ?

How to stop being victim ?



1- Keep Software Updated

2- Use Antivirus/Anti-Malware Software

3- Enable Two-Factor Authentication (2FA)

4- Backup Regularly

5- Exercise Caution with Email Attachments and Links

Scanurl

Check a website/URL for phishing, malware, viruses and poor reputation.

Enter a website URL below, and we'll see if it's been reported for phishing, hosting malware/viruses, or poor reputation. We check with reputable 3rd-party services, such as Google Safe Browsing Diagnostic, PhishTank, and Web of Trust (WOT).

All 3 fields are required to submit a URL.

Conclusion :

Conclusion :

When it comes to malware attacks, knowledge is the best possible weapon to prevent them. Be careful what you click!! .

Preventive measures should be taken before Ransomwares establish strong hold. Keeping all the software updated and getting latest security updates might help to prevent the attacks .

THANKS !!
